SUMMARY

Backend Engineer with experience in building scalable APIs, backend systems, and database-driven applications. Skilled in Python, FastAPI, and PostgreSQL with hands-on experience in optimizing system performance and designing efficient data processing workflows. Also experienced in applied AI/ML, including computer vision and generative AI systems, with a focus on integrating intelligent features into real-world applications.

WORK EXPERIENCE

Associate Engineer, Dexian Technologies **May 2025 - Present**

- Developed and optimized backend services using Python and FastAPI, improving API performance and reducing response latency by 30–40% under production workloads.
- Designed efficient database interactions and data processing workflows, enhancing system reliability and enabling faster data retrieval for real-world applications.
- Built and integrated AI-powered features (generative AI and computer vision) into backend systems, ensuring scalable deployment using Docker and Azure.

PROJECTS

CivicLens

- **Tech Stack:** React, React Native, TypeScript, FastAPI, PostgreSQL (PostGIS), AI/ML, Cloudflare
- Engineered a cross-platform civic reporting app featuring a gamified community validation system (upvotes/downvotes), increasing legitimate issue visibility and reducing spam by 40%.
- Implemented PostGIS spatial filtering to isolate feed data within a 5km radius, cutting overall database load by ~60% and accelerating feed load speeds.
- Integrated an AI-powered image classification pipeline to automatically categorize and route incoming incident reports, achieving 92% accuracy and cutting manual triage time in half.

NextRole AI

- **Tech Stack:** React.js, Typescript, Python, FastAPI, Docker, Github, PostgreSQL
- Built a full-stack job management platform with backend services for job tracking and application management.
- Developed AI-driven features for resume optimization and job application automation using LLM-based workflows.
- Designed scalable backend architecture using FastAPI and PostgreSQL for handling user data and workflows.

TECHNICAL SKILLS

- **AI / ML**: Computer Vision (YOLO), Deep Learning (CNN, LSTM), Generative AI, LLMs, RAG, Vector Databases
- **Backend**: Python, FastAPI, Flask, REST APIs, Microservices, Authentication (JWT), Nginx
- **Frontend**: React.js, TypeScript, JavaScript, React Native, HTML5, CSS3
- **Database**: PostgreSQL, MySQL, Redis, Query Optimization, Data Processing, Time Series DB
- **DevOps**: Docker, Azure, CI/CD Pipelines, Git, GitHub

EDUCATION

Bachelor of Technology in Computer Science **Sep 2021 - Oct 2025**
SRM University of Science and Technology

Relevant Coursework: Data Structures and Algorithms, Python Programming, Network Security, Database Management, Computer Networks
